### Monitoring and logging solutions

Prometheus, Elasticsearch/Logstash/Kibana (ELK), Splunk, Dynatrace

### Version control systems

Git, Subversion, Mercurial, CVS, RCS

## Praise and Recommendations

“

Along with his impressive technical skill set, Pat has been great to work with. He is a positive, upbeat personality that complements any team he is a part of. I believe Pat is a true example of the type of employee that every employer wants: highly skilled, accountable and responsible, with a superior work ethic and a personality to boot!

— **Jake Weaver, Founder & CEO, codesigned**

“

Patrick, your display of tenacity, creativity, and dedication through your perseverance and hard work for project D3884 delivered exemplary results! You beat the aggressive schedule, total costs were less than budgeted and service impacts to current customers were avoided. This project was delivered in a world class fashion; creating new processes that we can use on other complex programs. As a result of your efforts, our current and future customers can enjoy the best that our company has to offer!

— Kathryn Walker, Chief Network Officer, Sprint

“

Pat, thanks for the quick response for implementing an alarming solution for the ProDiff files. You have been instrumental in maintaining this project, and your documentation has helped others gain an understanding of the processes involved. Your ingenuity is well known among many here at Sprint and is not going unnoticed. Keep up the good work!

— Renee Keffer, Director Network Operations, Sprint

“

The right tool for tunneling SSH through a proxy like Squid, Gauntlet, CacheFlow, Junkbuster, or Apache mod\_proxy is Corkscrew. Why? Because the name corkscrew is well chosen, and because the program author introduces himself like this: "My name is Pat Padgett. I'm a dork." In my experience, such laconic people are great programmers.

— Charly Kühnast, Linux Magazine, September 2014 Issue

## Work Experience

May 2020 – Present

### Founder & CEO

#### VimOps

Owner of IT Company headquartered in the Kansas City metro area focused on website development and digital marketing campaigns for small businesses as well as various software projects for government contracts (CAGE code 8PMQ9).

- Founded and led an IT company specializing in website development, digital marketing, and software projects for government contracts.
- Developed targeted digital campaigns that significantly improved clients' online presence and generated increased engagement.
- Implemented automated IT infrastructure using DevOps tools such as Ansible, Docker, and CI/CD pipelines, enabling efficient deployments across multiple cloud platforms.
- Cultivated strong relationships with investors, suppliers, and clients to drive business growth.
- Achieved a 10x increase in social media engagement for clients within just two months.
- Authored impactful Wikipedia articles and obtained the highly sought-after Instagram Verified mark for a social media client.

January 2017 – November 2021

### Developer & Director of Information Technology

#### Hindia Indonesia Travel Agency

- Managed IT infrastructure for a government-contracted travel agency, ensuring efficient design documentation, inventory management, and change management.
- Led a high-performing team of programming, web development, and help desk professionals, driving exceptional customer support and seamless integration with transit booking systems.
